EDUCATION

B.Sc. Industrial Chemistry
Federal University of Technology, Akure
Expected 2028

FRONTEND

React Next.js Vue.js TypeScript
JavaScript Tailwind CSS HTML5 / CSS3

BACKEND

Python Node.js FastAPI Flask .NET / C#

DATABASES

PostgreSQL MongoDB Supabase Firebase

DEVOPS, TESTING & APIS

Docker Git Postman Shell / Bash CI/CD
REST API Design API Integration

AI / ML

Google Gemini API Model Fine-Tuning
Prompt Engineering Multi-Agent Systems

CORE STRENGTHS

- Cross-functional communication
- Critical thinking & problem solving
- Time management
- Adaptability & fast learning
- Team leadership

ACHIEVEMENTS

Wema Bank Hackathon
2nd Runner-up
Microsoft
Generative AI Certificate
Claude (Anthropic)
AI Fluency Certificate

ADEKOLA FOLARIN JOHN

FULL-STACK DEVELOPER

PROFILE

Full-stack developer with 3+ years of hands-on experience building end-to-end applications — from responsive React/Next.js/Vue.js interfaces to production-grade backends in Python, Node.js, and .NET. Comfortable owning a feature from database schema through API design to a polished, accessible UI. Experience extends into applied AI, including fine-tuning models for real business workflows and building multi-agent automation pipelines. Driven by curiosity and a habit of learning how systems work under the hood to ship solutions that are secure, reliable, and easy to use.

WORK EXPERIENCE

Frontend Developer Intern — Applistructure Consulting Ltd

Lagos, Nigeria | September 2025 - January 2026

- Built a hospital management system web application enabling patients to book appointments, schedule consultations, and securely access medical records online.
- Developed and maintained responsive, user-friendly interfaces for a dating application, a vendor management system (VCB), and additional internal projects.
- Designed responsive, accessible UIs with **React, TypeScript, and Tailwind CSS**, focused on usability and a seamless user experience across devices.
- Integrated **RESTful APIs** for secure patient data handling, doctor-patient communication, and real-time data display on the frontend.
- Collaborated on an e-commerce platform, implementing product listings, shopping cart, and order tracking flows with improved UI performance.

SELECTED PROJECTS

WEB & FRONTEND

Hospital Management System

Patient-facing web app for appointment booking, consultation scheduling, and secure medical record access.
[React](#) · [TypeScript](#) · [Tailwind CSS](#) · [REST APIs](#)

EHR Marketing System

Marketing platform for an Electronic Health Records product, built with a friendly, responsive UI to help healthcare teams showcase features and onboard new users, with clean navigation and fast load times.
[React](#) · [Tailwind CSS](#) · [Responsive Design](#)

Vendor Management System (VCB)

Responsive interface for managing vendor records and workflows, with reusable component architecture.
[Vue.js](#) · [JavaScript](#)

BACKEND & SYSTEMS

E-Commerce Backend API

Fully functional backend powering product catalog, cart, checkout, and order management, with authenticated RESTful endpoints, relational data modeling, and containerized deployment; endpoints tested and documented in Postman.
[Python](#) · [FastAPI](#) · [PostgreSQL](#) · [Docker](#) · [Postman](#)

End-to-End Encrypted Chat Backend

Real-time messaging backend with end-to-end encryption using AES-256, secure key exchange, and WebSocket-based message delivery for private, secure conversations between users.
[Python](#) · [WebSockets](#) · [AES-256 Encryption](#)

Streaming Platform Backend

Fully functional backend for a media streaming platform handling user authentication, content delivery, and catalog/playback management through RESTful APIs.
[.NET](#) · [C#](#) · [REST APIs](#)

APPLIED AI

Fine-Tuned AI Model for Enterprise Application

Fine-tuned and integrated a language model into a company's internal application via API, customizing it for domain-specific tasks to automate parts of the existing workflow.
[Model Fine-Tuning](#) · [API Integration](#)

AI Daily Digest — Multi-Agent Document Pipeline

Containerized multi-agent system that turns documents into a daily AI digest using the Google Gemini API. An Ingestor combines input files, a Summarizer extracts key points via Gemini, a Prioritizer ranks content by importance, and a Formatter generates the final markdown report.
[Python](#) · [Google Gemini API](#) · [Docker](#) · [Multi-Agent Architecture](#)
